

How to stop the emergence of hierarchy?

- Who and why:
mathematics \approx radicality
- Content:
 - What is hierarchy and freedom
 - Evolution in both directions

How?

- Game
- guess mechanism
- explanation
- examples \rightsquigarrow post-its!

Application at the end

Signal if unclear, questions!

Lets play!

Structure

One-directionality

One-directionality

Structure

One-directionality

⇒ no cycles

VS

2) only 1 influence

Structure

2) only 1 influence

VS

2) only 1 influence

VS

⇒ can get 'determined' by this influence

2) only 1 influence

VS

⇒ can get 'determined' by this influence

UNIVERSALITY

F_2

LOCAL COHERENCE

F_3

$$A \rightarrow B \Leftrightarrow A \cap B \neq 0 \wedge A \not\subseteq B$$

'The One'

Connected multiples

Lets play!

Cycles

- Positive feedback: growth
 - Butterfly effect
 - Rich getting richer
- Negative feedback: stability

Autopoiesis

Lets play!

Evolution

Formation of a controller

Coordination

Self-organization

Control:

higher order goal

⇒ can get unaligned

Constant opposition

No hierarchy when mechanism to prevent it
⇒ Focus on human agency

Constant opposition

Constant opposition

Constant opposition

Constant opposition

Constant opposition

skip, ☹

Constant opposition

skip, ☹

Constant opposition

Lets play!

Methods of self-organization

Leave traces in the environment on which there can be build on

⇒ Not necessary:

- direct interaction
- centrality

Methods of self-organization

Variation and selection

⇒ allows getting stronger through shocks (=antifragility)

Conclusion

Scheme

Application in smaller groups

(Write and) put your post-its to the corresponding post:

Examples in

- your own struggles
- daily life
- ...

Of:

- existing mechanisms
(good or bad)
- possibilities for change

Then discuss in 'open space' way.

Internal moderation: let everybody speak! + 'law of 2 feet'

Evaluation

Support

- Aim: independent from state or corporate funding, bureaucracy; community based
- alternative economy bottom up
- Support, exchange however you want

Summary

Intro, temperature check

Extra's

Hierarchy

Functional

Structural

- Freedom
- Constraint and coercion
- Internal and external control
 - mathematical
 - basic idea

Freedom

AS A RIGHT (TO CHOOSE)

Constraint and coercion

Constraint:
limits possibilities

Coercion:
when forced to do something
one does not want

Non-coercive constraint

Constraint can be non-coercive

Non-constraint coercion

Coercion can increase possibilities

When coerced?

Vulnerable
for coercion

Determination

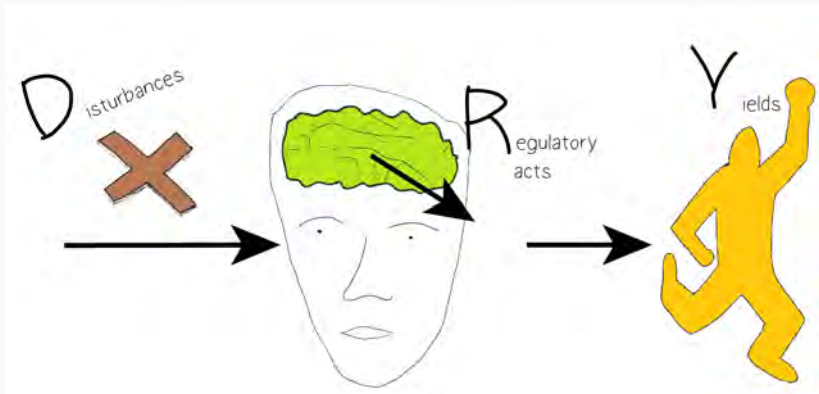

Vulnerable
for coercion

DEPENDENCE

Can be wanted

Internal or external control?

Internal or external control?

Internal control: change of R causes change in Y

Internal or external control?

External control: change of D causes change in Y

Internal or external control?

External control: change of D causes change in Y

Variation

Measurement of variation

In how far choosing R/D can decrease variation Y

Entropy

Entropy

VARIETY

Entropy

VARIETY

5

=

Entropy

LOW ENTROPY

HIGH ENTROPY

$$H(A) := - \sum_{a \in A} p(a) \log p(a)$$

Conditional entropy

Variation of variable B (e.g. limb position) when other variable A is known (e.g. color)

$$H_A(B) = 0$$

Conditional entropy

Variation of variable B (e.g. limb position) when other variable A is known (e.g. color)

$$H_A(B) = H(B)$$

How much of $H(B)$ gets reduced when A is known:

$$Det_A(B) = \frac{H(B) - H_A(B)}{H(B)}$$

How much of $H(B)$ gets reduced when A is known:

$$Det_A(B) = \frac{H(B) - H_A(B)}{H(B)}$$

- $H_A(B) = 0 \Rightarrow B = f(A)$: A determines B , $Det_A(B) = 1$

How much of $H(B)$ gets reduced when A is known:

$$Det_A(B) = \frac{H(B) - H_A(B)}{H(B)}$$

- $H_A(B) = 0 \Rightarrow B = f(A)$: A determines B , $Det_A(B) = 1$
- $H_A(B) = H(B) \Rightarrow A$ and B independent: no determination, $Det_A(B) = 0$

Internal and external control

Internal control:

$$Det_R(Y)$$

External control:

$$Det_D(Y)$$

Internal and external control

Internal control:

$$Det_R(Y)$$

External control:

$$Det_D(Y)$$

Internal and external control

Internal control:

$$Det_R(Y)$$

External control:

$$Det_D(Y)$$

Internal and external control

Internal control:

$$Det_R(Y)$$

External control:

$$Det_D(Y)$$

Internal and external control

Internal control:

$$Det_R(Y)$$

External control:

$$Det_D(Y)$$

Internal and external control

Internal control:

$$Det_R(Y)$$

External control:

$$Det_D(Y)$$

Internal and external control

Internal control:

$$Det_R(Y)$$

External control:

$$Det_D(Y)$$

INTERNAL CONTROL

EXTERNAL CONTROL

INTERNAL CONTROL

EXTERNAL CONTROL

Internal and external control

Internal control

External control

- Directed

F_2

- Sets

- Undirected

Hierarchy does not follow from assumptions

In

- Law of Requisite Hierarchy (\leftarrow Law of Requisite Variety)
- Perceptual control hierarchy
- Mesarovic's model

hierarchy was implicit belief: hierarchy did not follow from assumptions

Directionality \nRightarrow Hierarchy

Asymmetry can arise while local relation is symmetrical

Undirected network

Hierarchical network: low-degree nodes cluster together;
high-degree nodes connect clusters

HIERARCHICAL

HIERARCHICAL

HIERARCHICAL

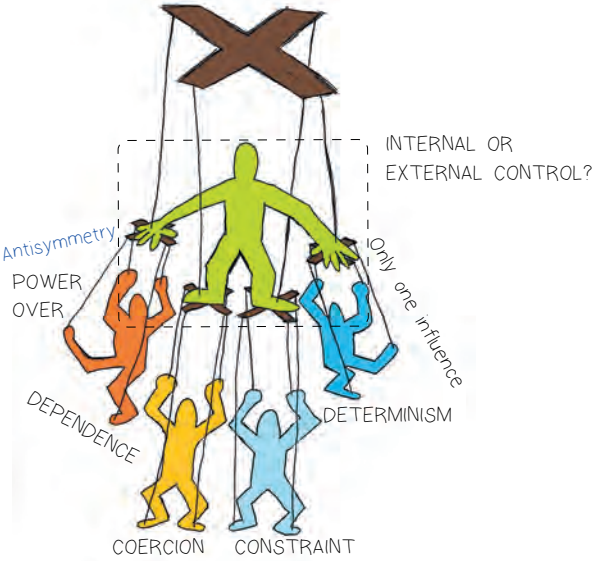

NON-HIERARCHICAL

Change

Summary- relation function-structure

Not necessarily in 1 person/group

Examples:

- society
- economy

Idée fixe

formation of a controller

Social power

formation of a controller

determinism vs co-evolution

Constant opposition
'The One' vs connected multiples

determinism vs co-evolution

Constant opposition
'The One' vs connected multiples

determinism vs co-evolution

Constant opposition
'The One' vs connected multiples

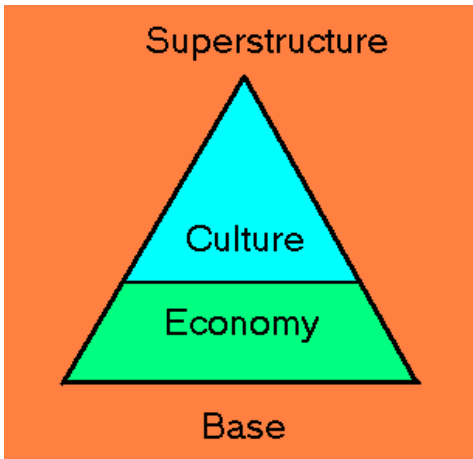

Human environment

How to change

First view: by changing the material base (economy, technology)
one-directional - economic determinism

Second view: focus on human agency
no hierarchy when mechanism to prevent it

Constant opposition

Constant opposition - simulation

Rich-getting-richer effect

Constant opposition - simulation

Take from agent with most

Conclusion

INTERNAL CONTROL

Connected multiples
 Non-hierarchical
 Cycles
 Power-to
 Internal control
 Co-evolution
 Human agency
 Anarchism
 Constant opposition
 Freedom as decision

'The One'
 Hierarchy
 Antisymmetry
 Power-over
 External control
 Determinism
 Changing the material base
 Marxism
 Formation of controller
 Freedom as right (to choose)
